

USE CASE · CAMERA OPERATIONS

Know when recording fails — before you need the footage.

NVR health, storage pressure, and clip availability visible from the owner dashboard.

WHAT YOU GET

01

Recording health, visible

Coverage, offline cameras, and storage pressure on one screen — checked daily without effort.

02

Smart motion gating

Drops segments with no detected persons. Keeps what matters, frees disk for what you actually need.

03

Offsite archive that works

Encrypted tiered sync to offsite storage with on-demand retrieval. Local disk stays lean.

HOW IT WORKS

WATCH THE SYSTEM

AXWEL monitors camera reachability, segment writes, disk pressure, and clip availability.

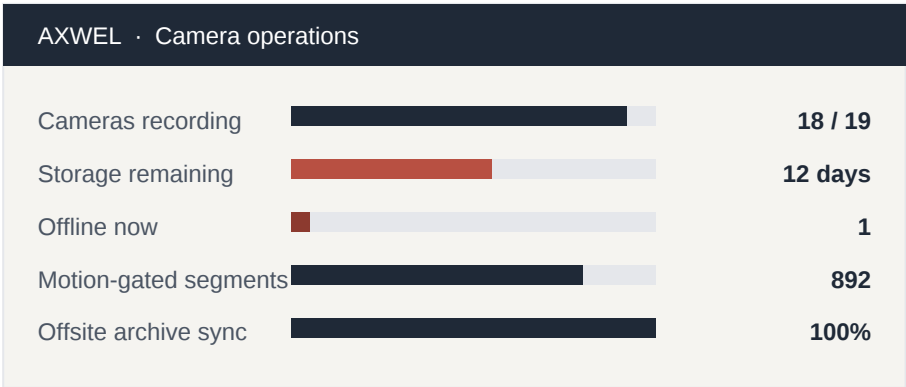

SURFACE THE GAPS

When a camera goes offline, storage gets tight, or a segment is missing, you hear about it.

ARCHIVE & RETRIEVE

Finalized recordings sync encrypted to offsite storage. Local disk evicts on policy. Pull back on demand.

WHAT IT LOOKS LIKE

What this gets you

- Camera + disk status visible to owners, not just IT
- Motion-gated recording to keep what matters
- Cloud gap-fill when local segments are missing
- Tiered offsite archive with on-demand retrieval

See it against your cameras.

A 30-minute walkthrough starts with your layout, camera count, and the daily risks you care about.
